

**Arachnicat, Colin Selig, 2020**

Arachnicat is a whimsical biomorphic sculpture climbing up out of the adjacent creek to explore Clover Park. Arachnicat is a playful, brightly colored focal point for the park which can be enjoyed visually from multiple angles at ground level and from the switchback trail and hillside above. Arachnicat is designed for tactile human interaction. Incorporated between the legs are three seating surfaces, allowing pedestrians and bicyclists to sit and relax. The sculpture is extremely eco-friendly since it's made entirely from repurposed scrap steel propane tanks, regionally sourced in the central valley.
